

How to Access Textworks

To access “textworks,” the COSAM compiler that I used in class today, go to the following website for instructions:

https://www.auburn.edu/cosam/it/virtual_machine_instructions.htm

follow them by clicking on the link in the sentence labeled with the number 1. This will take you (after logging in) to your COSAM desktop. Once there go to the start menu and go down to MikTeX – and Textworks is in that folder. Click on it and you’re ready to go. Make sure that the green triangle points to a “pdfLaTeX” entry before you click it to compile your LaTeX code.

You’ll need to send (maybe download) the .tex file to the COSAM virtual desktop. Then open it with textworks and compile the code into the pdf file.

The newly compiled .pdf file should be in the same directory/folder as your .tex file. This pdf file is what should be sent to me.
